

# Pouch Bagger

## ▲ BENEFITS

- Built to withstand packing house environments
- Speeds up to 30 bags a minute
- Servomotor allows for precise control of starting, stopping and speed.
- Maintenance free hollow shaft gearbox with no chains or belts
- Toolless changeover for different bag widths and lengths
- Rotary motion that works multiple bags at a time, resulting in much higher equipment productivity
- Self-contained heat sealer
- Compatible with all Newtec weighers

**NEW SOFT-FILL FEATURE IS GENTLE ENOUGH TO HANDLE APPLES, PEACHES, PEARS AND PLUMS!**

The Fox Solutions Pouch Bagger is custom built specifically for fresh produce packinghouses to achieve optimal product handling, pack line efficiencies and food safety. Unlike other bagging machines on the market, the Fox Solutions Pouch Bagger improves bagging automation and reduces the amount of downtime to change the line over.

- **EFFICIENCY** –The Fox Solutions Pouch Bagger’s servomotor provides higher precision bag filling as compared to the standard belt—or gear-driven machines on the market. It also utilizes a rotary versus linear motion that works multiple bags at a time, resulting in much higher equipment productivity.
- **EASE-OF-USE** – Other highlights of the machine’s durable construction include its maintenance-free hollow shaft gear box, tool-free changeover for different bag sizes, and a self-contained heat sealer. The Pouch Bagger is also 100 % compatible with all Newtec weighers.
- **FOOD SAFETY** – The Pouch Bagger’s full polished stainless steel construction stands out among the competition who still utilize many painted parts that lead to rust and machine sanitation issues.
